

Type: Restored Hybrid

Breeder's Reference: LE14/277

Trial Status 2017/18 UK Candidate

Arrow is a new hybrid that has the best combination of resistance to Light Leaf Spot and Stem Canker out of all varieties on the AHDB Recommended and Candidate Lists 2017/18. Arrow also possess the genetic trait of pod shatter resistance; vital for ensuring good yield stability. In addition to Arrows strong agronomic characteristics, the variety has consistently shown very high gross output levels across the UK.

GROSS OUTPUT:

Arrow has very high gross output and treated yield potential in fungicide treated trials across the UK.

AGRONOMIC CHARACTERISTICS:

	ARROW	PR46W21	PT211
Lodging Resistance	8	8	8
Stem Stiffness	8	8	8
Height (cm)	158	151	154
Earliness of Flowering	6	5	5
Earliness of Maturity	6	6	6
Disease Resistance:			
Light Leaf Spot	7	4	6
Stem Canker	8	3	6
Oil Content:			
Oil Content @ 9% Moisture	45.1	45.5	45.2

Arrow has RLM7 resistance, giving the variety excellent protection against stem canker.

Arrow has a 'best available' rating of 7 for Light Leaf Spot. Light Leaf Spot is considered more difficult to control than Stem Canker and is now widespread throughout the UK.

Breeder's Reference: LE14/277

Trial Status 2017/18 UK Candidate

Arrow possesses the valuable genetic trait of pod shatter resistance, providing growers with the ability to dramatically cut seed losses both before and during harvest. This can result in higher and more stable yields, as well as reducing volunteer pressure. Pod shatter resistance is especially valued in our unpredictable climate, when thunderstorms and delayed harvests are increasingly common. It is also important at harvest when the passage of the combine through the standing crop can cause significant losses.

Arrow has been tested for pod shatter resistance, meaning potential seed losses can be dramatically reduced.

Pod shatter resistance can help reduce harvest losses.

Arrow produces good oil content levels similar to the control varieties.

Arrow is slightly taller than the control varieties, however its resistance to lodging and stem stiffness are equal to the controls.

Arrow has the best combination of resistance to Light Leaf Spot and Stem Canker out of all varieties on the AHDB Recommended and Candidate Lists 2017/18.

Jan 2017. Data from the AHDB Recommended List 2017/18. On the 1-9 scales, high figures indicate that a variety shows the character to a high degree.
